

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	06/09/2026
Team ID	Servicenow
Project Name	Automated Network Request Management
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Network Request Submission	Submit request via the Network Request Service Catalog item Capture connection type, address, and payment details through catalog variables
FR-2	Requester Auto-Population	Auto-populate requester's name, email, and phone via the Request Information variable set Allow submission on behalf of another user
FR-3	Conditional Form Behaviour	Show "Enter your Existing ID" field only when Type of Connection = Existing Hide the field for New connection requests
FR-4	Automated Record Creation	Create a record on the Database Tables (u_database_tables) table on submission Map all catalog variables to the corresponding table fields
FR-5	Approval Routing	Route the created request for approval through ServiceNow's native Approval engine Update Approval Status based on the outcome (Approved / Rejected)
FR-6	Notifications	Send an email confirmation when the request is submitted Send an email update once the approval decision is made
FR-7	Access Control	Restrict create / read / write / delete on request records to the u_database_tables_user role

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	A single, guided catalog form with conditional fields, so requesters submit a request without needing IT assistance
NFR-2	Security	Role-based ACLs (u_database_tables_user) restrict who can view or modify request data
NFR-3	Reliability	Flow Designer executes the same sequence of steps for every request, ensuring consistent record creation, approval routing, and status updates
NFR-4	Performance	Request submission, record creation, and email dispatch complete in real time on the ServiceNow platform
NFR-5	Availability	Hosted on a ServiceNow instance, inheriting the platform's vendor-managed uptime and availability SLAs
NFR-6	Scalability	Built on ServiceNow's multi-tenant platform; additional request types or approval stages can be added without redesigning the solution
