

Project Design Phase Proposed Solution Template

Date	06/09/2026
Team ID	ServiceNow
Project Name	Automated Network Request Management
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Employees have no structured, centralized way to raise or track network service requests — requests are handled through emails and phone calls, approvals are manual, and requesters get no visibility into status.
2.	Idea / Solution description	A ServiceNow-based Automated Network Request Management solution: a Network Request Service Catalog item captures the request, a Request Information variable set auto-populates requester details, a Flow Designer flow creates the request record and routes it through ServiceNow's native Approval engine, and email notifications keep the requester informed at each stage.
3.	Novelty / Uniqueness	Combines a guided Service Catalog form, a Catalog UI Policy for conditional fields, and end-to-end Flow Designer automation with native approvals — delivered entirely with no-code / low-code configuration and no custom scripting (no Business Rules or Script Includes).
4.	Social Impact / Customer Satisfaction	Reduces employee frustration and wasted time chasing status updates; frees IT and network teams from manual tracking; increases trust in IT service delivery through transparency and faster turnaround.
5.	Business Model (Revenue Model)	Internal IT service improvement rather than an external revenue product — value is realized as reduced manual effort and faster fulfilment, lowering the operational cost of handling network requests.
6.	Scalability of the Solution	Built on ServiceNow's multi-tenant platform; the same catalog item +

S.No.	Parameter	Description
		variable set + Flow Designer pattern can be extended to other IT service requests (e.g. hardware, software, access requests) without re-architecting the solution.
