

User Acceptance Testing (UAT) Template

Date	06/09/2026
Team ID	Servicenow
Project Name	Automated Network Request Management
Maximum Marks	4 Marks

Project Overview:

Project Name: Automated Network Request Management

Project Description: A ServiceNow-based solution that automates the intake, approval, and fulfilment of employee network service requests using a Service Catalog item, Flow Designer, the native Approval engine, and a custom request table.

Project Version: 1.0

Testing Period: 01 sep 2026 to 04 sep 2026

Testing Scope:

- Network Request Service Catalog item, catalog variables, and the Request Information variable set
- Catalog UI Policy for conditional visibility of the Existing ID field
- Flow Designer automation: record creation, email notifications, and approval routing
- Native Approval engine and If/Else branching on approval outcome
- Role-based access control (ACLs) on the Database Tables table
- User stories USN-1 through USN-9 covering submission, approval, notifications, and access control

Testing Environment:

URL/Location: ServiceNow Personal Developer Instance (PDI) — Service Portal (instance-url/sp)

Credentials (if required): Test user account provisioned with the requester role, and a separate account with the u_database_tables_user role, created during PDI setup

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Submit a new network connection request	1. Log in to the Service Portal 2. Open the Network Request catalog item 3. Select Type of Connection = New 4. Fill Requested For, Mobile Number, Address, Total Amount, Mode of Payment 5. Submit	A record is created on the Database Tables table with a unique NRM-prefixed number; requester receives a confirmation email	Record created as expected; confirmation email received	Pass
TC-002	Conditional field appears for Existing connection	1. Open the Network Request catalog item	The "Enter your Existing ID" field becomes visible	Field appeared as expected	Pass

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
		2. Select Type of Connection = Existing			
TC-003	Conditional field hidden for New connection	1. Open the Network Request catalog item 2. Select Type of Connection = New	The “Enter your Existing ID” field remains hidden	Field stayed hidden as expected	Pass
TC-004	Flow Designer creates the request record	1. Submit a Network Request 2. Open the Database Tables list view	A new record appears with fields correctly mapped from the submitted catalog variables	Record matched submitted data	Pass
TC-005	Request is routed for approval	1. Submit a Network Request 2. Log in as the approver 3. Check the approvals list	An approval record is created and assigned to the requester's manager	Approval record appeared as expected	Pass
TC-006	Approve a request	1. As approver, open the pending approval 2. Click Approve	Approval Status updates to Approved; requester receives a status email	Status updated and email received	Pass
TC-007	Reject a request	1. As approver, open the pending approval 2. Click Reject	Approval Status updates to Rejected; requester receives a status email	Status updated and email received	Pass
TC-008	Role-based access control on request records	1. Log in as a user without the u_database_tables_user role 2. Attempt to open a Database Tables record	Access is denied per the auto-generated ACLs	Access correctly denied	Pass
TC-009	Auto-numbering of requests	1. Submit multiple Network Requests	Each record receives a unique, sequential NRM-prefixed number	Numbers were unique and sequential	Pass

Bug Tracking:

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	“Existing ID” field remained visible after switching Type of Connection back to New	1. Select Existing 2. Enter an ID 3. Switch selection back to New	Medium	Closed	Fixed by adding a reverse condition to the Catalog UI Policy so the field clears and hides on New
BG-002	Status email was not sent when a request was rejected	1. Submit a request 2. Reject it as approver	High	Closed	Fixed by adding a Send Email step to the Else branch of the flow's approval logic
BG-003	Resubmitting a browser tab after submission could trigger a duplicate flow run	1. Submit a request 2. Refresh/resubmit the same browser tab	Low	Won't Fix	Edge case outside current scope; documented as a known limitation for a future release

Sign-off:

Tester Name: Puchakayala Asritha

Date: 04 sep 2026

Signature: Asritha

Notes:

- All test cases covered both positive scenarios (New / Existing connection paths) and negative scenarios (unauthorized access, rejected approvals).
- Bug tracking included severity, status, and steps to reproduce for each issue found during testing.
- Sign-off was obtained before considering the solution ready for demonstration and submission.
